

Amendments to the Specification:

Please replace the paragraph beginning at page 14 line 1 with the following amended paragraph.

The counterweight system 158 generally includes a first pulley 180, a second pulley 182, and a counterweight 184. The counterweight system 158 allows tension adjustment to the upper portion of the container 10. The first pulley 180 is connected to the cross rail 178 and the second pulley 182 is connected to a side of the box 100 by a suitable support 183 for pulley 182 as schematically shown in FIG. 13a. The hanger system 150 is connected such that a first end 186 of the cable 156 is connected to the hanger 152 and a second end 188 of the cable 156 is connected to the counterweight 184. The counterweight 184 is suspended outside and adjacent to the box 100. The cable 156 passes over the first pulley 180 and the second pulley 182. The hanger system 150 provides an upward biasing force to the top portion of the flexible container 10. By changing the weight of the counterweight 184, tension on the container 10 can be adjusted, in keeping with the volume of the container 10.
